

DESCRIPTION

The advantage of the Twin is you can produce two flavours simultaneously.

Equipped with sophisticated software which manages its functions.

In addition to the normal manual function, the operator has at his disposal:

4 Specific production programs (Gelato Classico - Semi-Soft Ice Cream - Granita - Shock freezing)

4 Specific storage programs selectable depending on the different needs and characteristics of the product.

An electronic inverter system for the control and regulation of the motor enables to vary the number of RMP of the blade (from 55 to 115 rpm) to achieve desired results.

These automatic programs, as well as ensuring the best results, make the machine completely autonomous, leaving the operator free to focus on other tasks.
